

Pharmacy Management System

Project Submitted To

S.D. COLLEGE HOSHIARPUR

(PANJAB UNIVERSITY, CHANDIGARH)

IN

THE PARTIAL FULLFILMENT OF

BACHELOR OF COMPUTER APPLICATIONS 2025

SUPERVISED BY

Asst. PROF. NISHA ARORA(HOD)

Asst. PROF. KESHAV

Asst. PROF. NITIKA

SUBMITTED BY

AMIT SINGH

DEEPAK KAUSHAL

ACKNOWLEDGEMENT

I would like to express my special thanks to our mentors Asst.Prof. Keshav Diwan and Asst.Prof.Miss Nitika for their time and efforts they provided throughout the year. Your useful advice and suggestions were really helpful to us during the project's completion. In this aspect, I am eternally completed entirely by my group

I would also want to thank SD college for accepting my project in my desired field of expertise I'd also like to thank my friend and parents for their support and encouragement as I worked on this project.

Deepak Kaushal

Amit Singh

DECLARATION BY

AMIT SINGH

FOR

PHARMACY MANAGEMENT SYSTEM

I hereby, certify that this work on "Pharmacy Management System" is present in partial fulfilment for the award of bachelor of computer application at SD college Hoshiarpur . This report is an authentic record of my own work carried out during a period of BCA 6th Sem under the supervision of Asst.Prof.Keshav and Asst.Prof.Nitika This is certify that the above statement made by the candidate is correct to the best of our knowledge .

H.O.D. Signature

Project In-charge Signature

CERTIFICATE OF ORIGINALITY

This is to certify that the project report entitled
"PHARMACY MANAGEMENT SYSTEM" submitted to
PANJAB UNIVERSITY in partial fulfilment of the
requirement for the award of the BCA is original work
carried out by :

DEEPAK KAUSHAL (2452904) & AMIT SINGH (2452907)

under the guidance of :

Asst . Prof. Keshav and Asst. Prof. Nitika

The matter embodied in this project is genuine work done
by the student.

How it Works:

1. User Authentication

- Admin log in to access the system securely.

2. Dashboard & Stock Management

- View medication stock, sales, and reports.
- Alerts for low-stock and expiring medicines.

3. Medication Management

- Add, update, or delete medication records.

- Maintain manufacturer and category details.

4. Sales & Invoice Generation

- Process customer sales.
- Store sales records in the database.

5. Reporting & Analysis

- Generate reports for stock, sales trends, and performance.
- Export reports in PDF format .

ABSTRACT

The purpose of the Pharmacy Management System is to automate the existing manual system through a comprehensive computerized solution, ensuring efficient data management, accessibility, and security. This system enables streamlined operations, reducing the dependency on paper records and manual processes while ensuring that critical pharmaceutical data is stored, accessed, and manipulated efficiently. The required hardware and software components are readily available, making the system easy to implement and maintain.

The Pharmacy Management System primarily focuses on managing key aspects such as Medication Inventory, Sales Transactions, Customer Records, Suppliers, and Expiry Tracking. It maintains records of stock levels, prescriptions, sales history, and supplier details, ensuring smooth pharmaceutical operations. The system is designed with an administrative control structure, allowing only authorized personnel to access and manage data efficiently. The objective of this project is to develop a robust software solution that optimizes the management of medication stock, minimizes errors, enhances operational efficiency, and ensures timely tracking of low-stock and expiring medicines, ultimately improving pharmaceutical service delivery.

Introduction

The Pharmacy Management System (PMS) is a modern, digital solution designed to manage the day-to-day operations of pharmacies and medical stores. With increasing demand for automation in healthcare services, a reliable and efficient system for managing inventory, sales, prescriptions, and customer data has become essential. This project focuses on developing a software application that streamlines pharmacy processes, improves accuracy, reduces manual workload, and ensures timely medication management. The system enables pharmacists and administrators to oversee medicine stocks, monitor expiry dates, and manage sales transactions with minimal effort.

Rationale

In traditional pharmacies, manual methods such as paper records or basic spreadsheets are still widely used for inventory tracking and customer management. These approaches are prone to human error, lack of scalability, and make it difficult to quickly access or update critical data. The need for a centralized, digital system is vital to ensure real-time tracking of medicines, avoid stockouts, identify soon-to-expire items, and generate insightful reports. PMS addresses these limitations by automating

core functionalities and introducing real-time control over pharmacy inventory and operations. It also helps ensure compliance with safety standards and improves customer satisfaction through faster service and accurate record-keeping.

Objectives

- To develop a user-friendly, secure, and efficient application for managing pharmacy inventory and operations.
- To enable real-time tracking of stock levels and provide alerts for low-stock and expiring medications.
- To maintain a comprehensive database of medications, including generic names, categories, and manufacturers.
- To allow for easy updates and management of medication details, including unit price and dosage.
- To enhance the overall efficiency of the pharmacy by reducing manual tasks and minimizing errors.
- To ensure secure login and data access only for authorized personnel (e.g., admins, pharmacists).
- To generate reports for stock, sales, and medication alerts for better decision-making.

Need of PMS Inventory

Inventory management is a crucial part of any pharmacy's daily operations. Without proper tracking, a pharmacy can face challenges such as overstocking, stockouts, expired medications, and financial loss. A Pharmacy Management System helps maintain the balance between demand and supply by continuously monitoring inventory levels, updating them in real time with each sale or purchase, and triggering alerts when a particular medication is running low or nearing expiry. The system ensures that patients have uninterrupted access to necessary medications while reducing waste and improving the financial efficiency of the pharmacy.

Functionalities

- Admin Login and Authentication
- Add, Edit, or Delete Medications
- Track Stock Quantity and Expiry Dates
- Low-Stock and Expiry Alerts
- Segmentation Medicines by Category, Name, or Manufacturer
- Record Sales and Generate Invoices
- Generate Reports for Inventory and Sales

- Manage Suppliers and Delivery Information
- Backup and Restore Database Functionality
- User Management and Access Control

Features

- Intuitive and responsive user interface for ease of use
- Secure login system to restrict unauthorized access
- Medication records with full details (name, dosage, price, manufacturer, category)
- Dynamic tables to display stock status, categorized by expiry, type, or quantity
- Dashboard for quick overview of total stock, expiring medicines, and sales metrics
- Automated alerts for low-stock and soon-expiring medications
- Invoice generation feature for customer billing
- Support for adding generic and branded medications
- Easy-to-maintain and scalable backend system
- Printable reports for administration and audit purposes

Technology Used

To build a robust, dynamic, and responsive Pharmacy Management System, several core web development technologies were used. Each plays a distinct role in building the user interface, server-side logic, and interaction design of the ..

HTML (HyperText Markup Language)

HTML is the foundational language used for creating the structure and layout of web pages. In this project, HTML is used to design the interface of the pharmacy system including forms, tables, input fields, buttons, and overall page structure. It ensures proper content organization and helps define the visual flow of the application.

PHP (Hypertext Preprocessor)

PHP is a powerful server-side scripting language used to develop the backend of the Pharmacy Management System. It handles core functionalities such as user authentication, database interaction, inventory logic, record updates, and dynamic data rendering. PHP communicates with the MySQL database to store, retrieve, and manipulate data efficiently and securely.

CSS (Cascading Style Sheets)

CSS is used to style the HTML components of the system. It ensures the visual design is clean, professional, and user-friendly. Through CSS, components such as buttons, tables, alerts, and dashboards are styled to improve usability and appearance, making the system responsive and aesthetically pleasing across different devices.

Tools Used

XAMPP

XAMPP is an open-source cross-platform web server solution package developed by Apache Friends, which includes Apache HTTP Server, MySQL database, and interpreters for PHP and Perl. XAMPP is used in this project as the local development environment.

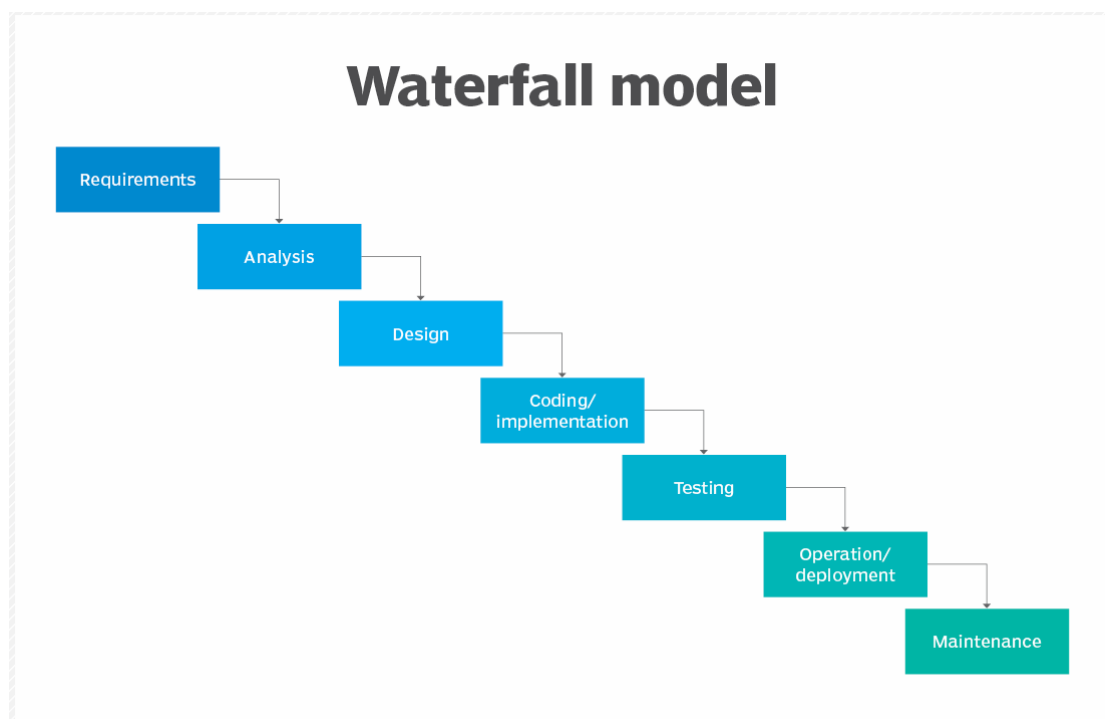

Key components:

- Apache: Hosts and serves the web application locally.
- MySQL: Stores all the database tables including medications, sales, staff, and customers.

- PHP: Executes server-side logic using the embedded PHP engine.
- phpMyAdmin: Provides a GUI to manage the MySQL database visually.

XAMPP provides a simple and effective platform for testing and developing the PMS system on a local machine before deployment.

Methodology Development Model

For the development of the Pharmacy Management System (PMS), the Waterfall Model was adopted. This

traditional software development methodology provides a clear, structured approach, ideal for projects with well-defined requirements and scope.

The Waterfall Model is composed of sequential phases:

1. Requirement Analysis – Understanding the system requirements by collecting data from real pharmacy operations.
2. System Design – Defining the software architecture, data flow, database schema, and user interfaces.
3. Implementation – Writing the actual code for the front-end, back-end, and database modules.
4. Testing – Conducting rigorous testing of the software to identify and fix bugs, and to ensure the system performs as expected.
5. Deployment – Installing the system for end users and configuring it for a production environment.
6. Maintenance – Handling updates, bug fixes, and enhancements based on user feedback.

This model ensures each phase is completed before the next one begins, maintaining clarity and control over project development.

System Design Model

The PMS is designed using a three-tier architecture that separates the user interface, application logic, and database layers:

1. Presentation Layer (Front-End)

- Built using HTML, CSS, and JavaScript
- Provides user interfaces for admin and customers
- Allows input forms, search functionality, and report viewing

2. Business Logic Layer (Application)

- Developed in PHP
- Contains core logic for inventory management, alerts, sales processing, and authentication
- Handles CRUD operations for medications and user management

3. Data Layer (Database)

- MySQL is used for data storage
- Manages tables like medications, users, sales, and suppliers
- Enforces relationships using primary and foreign keys for data integrity

Admin Workflow Process

The admin user has full access to all system functionalities and workflows. The typical process flow includes:

1. Login through secure credentials
2. Dashboard view with summaries of total medications, low stock, and recent sales
3. Add/Edit/Delete medications with details like name, dosage, price, category, and expiry date
4. Monitor stock levels and receive alerts for low inventory

or upcoming expiries

5. Record and manage sales transactions and generate invoices

6. View, filter, and export reports (inventory, sales, expiring medications)

7. Backup and restore data for security and data recovery

Database Design

Schema Design

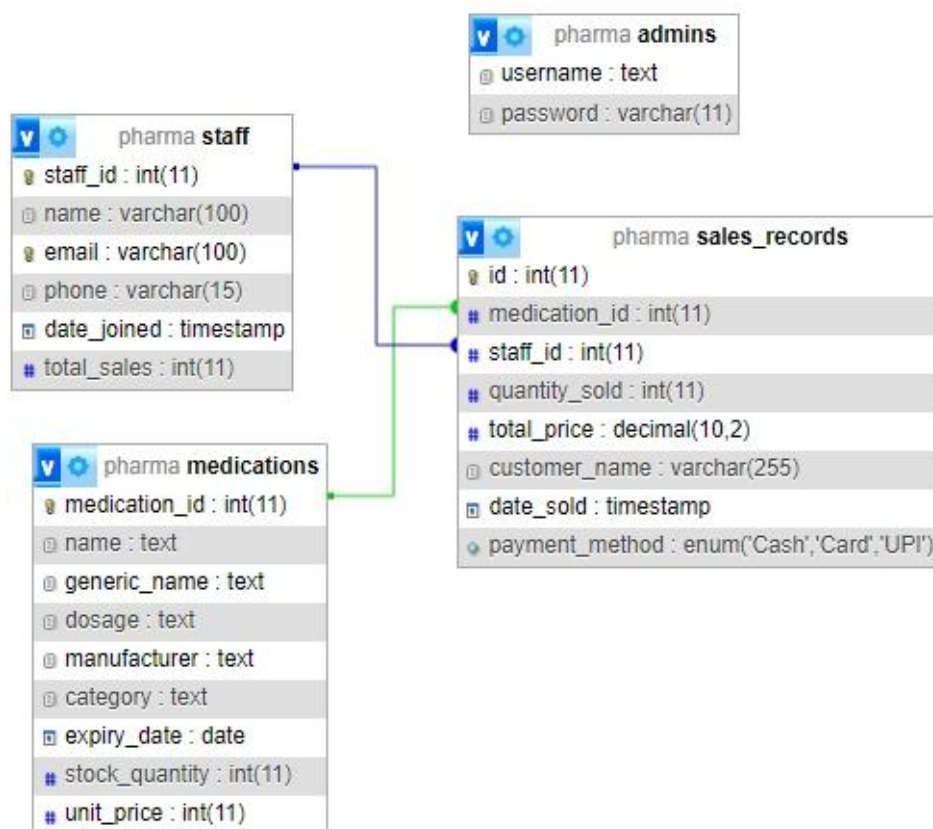

Table Design

Admin Table:

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
<input type="checkbox"/>	1 username	 varchar(50)	utf8mb4_general_ci		No	None			 Change  Drop  More
<input type="checkbox"/>	2 password	text	utf8mb4_general_ci		No	None			 Change  Drop  More

Staff Table:

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
<input type="checkbox"/>	1 staff_id	 int(11)			No	None			 Change  Drop  More
<input type="checkbox"/>	2 name	varchar(100)	utf8mb4_general_ci		No	None			 Change  Drop  More
<input type="checkbox"/>	3 email	 varchar(100)	utf8mb4_general_ci		No	None			 Change  Drop  More
<input type="checkbox"/>	4 phone	varchar(15)	utf8mb4_general_ci		No	None			 Change  Drop  More
<input type="checkbox"/>	5 date_joined	timestamp			No	current_timestamp()			 Change  Drop  More
<input type="checkbox"/>	6 total_sales	int(11)			Yes	0			 Change  Drop  More

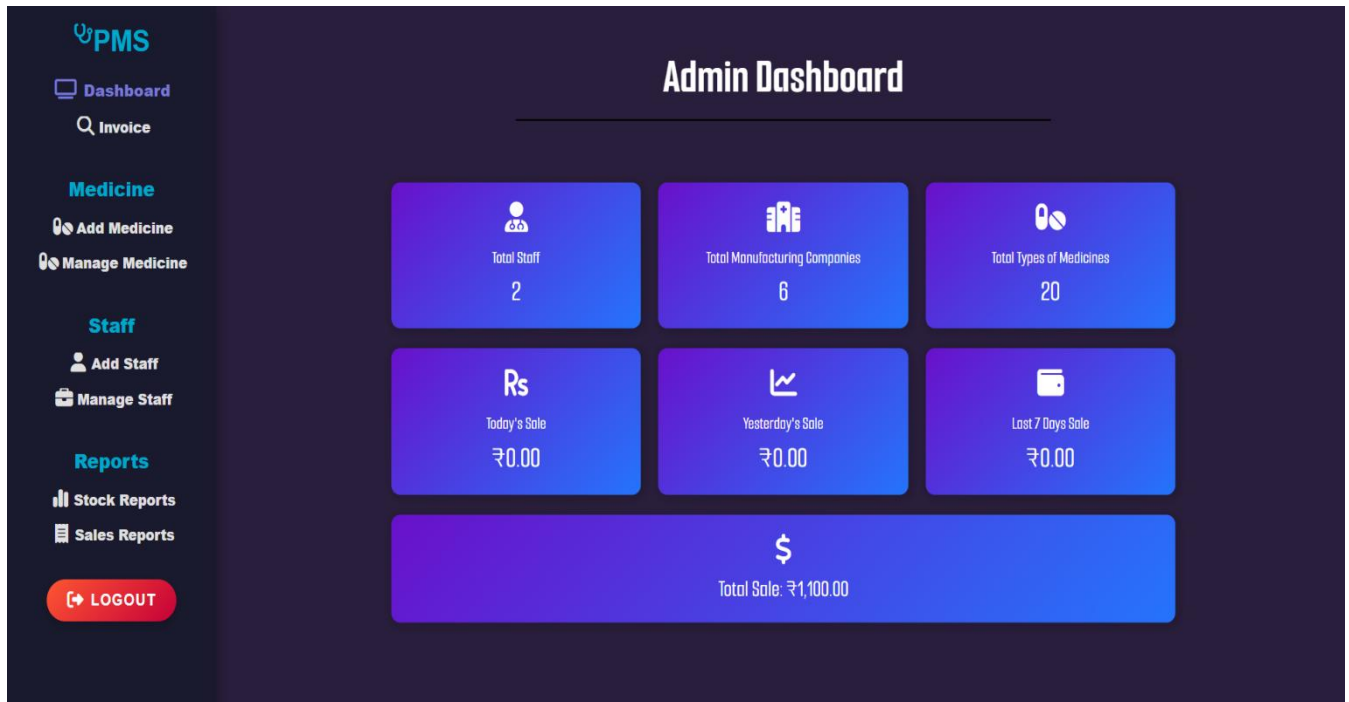

Medications Table:

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
<input type="checkbox"/>	1 medication_id	 int(11)			No	None		AUTO_INCREMENT	 Change  Drop  More
<input type="checkbox"/>	2 name	text	utf8mb4_general_ci		No	None			 Change  Drop  More
<input type="checkbox"/>	3 generic_name	text	utf8mb4_general_ci		No	None			 Change  Drop  More
<input type="checkbox"/>	4 dosage	text	utf8mb4_general_ci		No	None			 Change  Drop  More
<input type="checkbox"/>	5 manufacturer	text	utf8mb4_general_ci		No	None			 Change  Drop  More
<input type="checkbox"/>	6 category	text	utf8mb4_general_ci		No	None			 Change  Drop  More
<input type="checkbox"/>	7 expiry_date	date			No	None			 Change  Drop  More
<input type="checkbox"/>	8 stock_quantity	int(11)			No	None			 Change  Drop  More
<input type="checkbox"/>	9 unit_price	float			No	None			 Change  Drop  More

Sales Table:

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
<input type="checkbox"/>	1 id	 int(11)			No	None		AUTO_INCREMENT	 Change  Drop  More
<input type="checkbox"/>	2 medication_id	 int(11)			No	None			 Change  Drop  More
<input type="checkbox"/>	3 staff_id	 int(11)			No	None			 Change  Drop  More
<input type="checkbox"/>	4 quantity_sold	int(11)			No	None			 Change  Drop  More
<input type="checkbox"/>	5 total_price	decimal(10,2)			No	None			 Change  Drop  More
<input type="checkbox"/>	6 customer_name	varchar(255)	utf8mb4_general_ci		Yes	NULL			 Change  Drop  More
<input type="checkbox"/>	7 date_sold	timestamp			No	current_timestamp()			 Change  Drop  More
<input type="checkbox"/>	8 payment_method	enum('Cash', 'Card', 'UPI')	utf8mb4_general_ci		No	None			 Change  Drop  More

OUTPUT

The Record Sale form is a white card on a dark purple background. It contains dropdown menus for Staff and Medicine, input fields for Quantity and Customer Name, and a dropdown for Payment Method. A RECORD SALE button is at the bottom.
